

J&M GL1800 Phone/GPS/Radar Intergration

Integrate the audio signals from a cell phone, GPS and/or radar detector with the drivers (only) helmet headset. J&M GL1800 Electronics at Wingstuff.com Low Pricing! Wingstuff.com now has the J&M GPS Harness Adapters shown on drop down for Passport 8500, Garmin 2610-2820 Units. This component terminal will integrate the audio signals from a cell phone, GPS and/or radar detector with the drivers (only) helmet headset. If the cell phone normally rings out of its hands-free headset jack, or emits any other beeps or tones, it will momentarily be heard in the left headset speaker. A flip of the supplied control switch activates complete connection of the drivers headset to the cell phone for hands-free operation. If the radar detector or GPS unit emits any commands, beeps or braps, regardless of what else might be being heard in the headset, they will momentarily be heard in the right speaker.
